1 NO POVERTY

End poverty in all its forms everywhere

In 2020, the number of people living in extreme poverty (living on less than USD 2.15 a day) rose to 724 million. Those living in extreme poverty struggle to fulfill the most basic needs (health, education, access to water and sanitation).

Recovery from the pandemic has been slow and uneven, with extreme poverty dropping from 9.3 per cent in 2020 to 8.8 per cent in 2021. The conflict in Ukraine has disrupted global trade, leading to increased living costs that are disproportionately impacting the poor. Furthermore, climate change poses substantial threats to poverty reduction.

By the end of 2022, nowcasting suggests that 8.4 per cent of the world's population, or as many as 670 million people, could still be living in extreme poverty.

Poverty affects developed countries as well. Right now, 30 million children are growing up poor in the world's richest countries.

Eradicating poverty in all its forms remains one of the greatest challenges facing humanity. While the number of people living in extreme poverty dropped by more than half

End hunger, achieve food security and improved nutrition and promote sustainable agriculture

Ensure healthy lives and promote well-being for all at all ages

Conserve and sustainably use the oceans, seas and marine resources for sustainable development

Achieve gender equality and empower all women and girls

Take urgent action to combat climate change and its impacts

Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

Ensure availability and sustainable management of water and sanitation for all

Ensure access to affordable, reliable, sustainable and modern energy for all

Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, halt and reverse land degradation, and halt biodiversity loss

The Importance of Biodiversity 生物多样性的的重要性

Green Development: Balancing Growth and Responsibility

Green is the color of nature and the symbol of life. A sound eco-environment is the basic foundation for a better life, and the common aspiration of the people. **Green development follows the laws of nature to promote harmonious coexistence between humanity and nature.** Green development obtains the maximum social and economic benefits at minimum cost in resources and environmental impact, and sustainable and high-quality development that protects the eco-environment. **It has become the goal of all countries.**

The concept of “harmony between humanity and nature” is a distinct characteristic of Chinese civilization.

人法地，地法天，天法道，道法自然。

Man follows the Earth. The Earth follows Heaven. Heaven follows the Dao. The Dao follows what is natural.

《道德经》

四时行焉，百物生焉。

The four seasons follow their course, and all things grow accordingly.

《论语·阳货》

不违农时，谷不可胜食也。

If the timing of farming is not disrupted, there will be more grain than people can consume.

《孟子·梁惠王上》

草木荣华滋硕之时，则斧斤不入山林。

When the trees and grasses flourish in their prime, axes and hatchets should not enter the forests.

《荀子·王制》

天地与我并生，万物与我为一。

Heaven and Earth were born together with me, and all things and I are one.

《庄子·齐物论》

Read the passage to understand nature in Chinese culture

文章来源

Nature in Chinese Culture

Department of Asian Art, The Metropolitan Museum of Art
October 2004

In no other cultural tradition has nature played a more important role in the arts than in that of China. Since China's earliest dynastic period, real and imagined creatures of the earth—serpents, bovines, cicadas, and dragons—were endowed with special attributes, as revealed by their depiction on ritual bronze vessels. In the Chinese imagination, mountains were also imbued since ancient times with sacred power as manifestations of nature's vital energy (qi). They not only attracted the rain clouds that watered the farmer's crops, they also concealed medicinal herbs, magical fruits, and alchemical minerals that held the promise of longevity. Mountains pierced by caves and grottoes were viewed as gateways to other realms—"cave heavens" (dongtian) leading to Daoist paradises where aging is arrested and inhabitants live in harmony.

Questions:

1. What symbolic meanings were associated with mountains in ancient Chinese culture? List at least two.
2. According to traditional Chinese philosophy, what is the concept of Dao? How does it differ from Western notions of causality or divine control?

Question 1:

What symbolic meanings were associated with mountains in ancient Chinese culture? List at least two.

Suggested Answer:

1. Mountains were seen as **manifestations of nature's vital energy (qi)** and endowed with sacred power.
2. They were believed to be gateways to “**cave heavens**” (**dongtian**)—Daoist paradises where aging is halted.
3. Mountains contained **medicinal herbs, magical fruits, and alchemical minerals** that promised longevity.

Question 2:

According to traditional Chinese philosophy, what is the concept of Dao? How does it differ from Western notions of causality or divine control?

Suggested Answer:

Dao is the fundamental principle by which all things exist, but it is not a causal or governing force. Unlike Western philosophy, Chinese thought focuses on the relationships among elements in nature rather than identifying what makes or controls them.

1. 生态保护 ecological conservation
2. 生态补偿 ecological compensation
3. 大自然的搬运工 porters of nature
4. 退耕还林 reversing deforestation 植树造林 afforestation
5. 治霾 haze fighting
6. 治沙 sandstorm source control
7. 地球卫士奖 Champions of the Earth award
8. 碳达峰 carbon emissions peaking ; 碳中和 carbon neutrality

1. 西气东输: West-to-East **Gas Pipeline** Project;
2. 西电东送: West-to-East **Power Transmission** Project
3. 北煤南运: North-to-South **Coal Transport** Project
4. 南水北调: South-to-North **Water Diversion** Project

1. “Fighting a war to **keep the skies blue, waters clear and lands pollution-free**” is one of the three primary tasks in building a moderately prosperous society in all respects.

中国把生态环境保护看成和平时期的战争，如**蓝天、碧水、净土保卫战**。

2. For land, the focus is laid on reversing deforestation, and for rivers and seas, the focus is on **closed fishing**; for Beijing and Shanghai, **haze fighting** is the biggest environmental concern, for Inner Mongolia, **sandstorm source control** is a top priority, and for Jiangsu and Zhejiang, **water conservancy** is attached great importance to; for the urban areas, **garbage sorting** is a crucial environmental measure while for the rural areas, **toilet revolution** is a key tactic to improve the environment.

陆地退耕还林、江海禁渔，北京上海重点治霾、内蒙古重点治沙、江浙重点治水，城市抓垃圾分类，农村抓厕所革命。

3. China is aiming to **peak carbon dioxide emissions** before 2030 and achieve **carbon neutrality** before 2060”.

中国的二氧化碳排放力争于2030年前达到**峰值**，努力争取2060年前实现**碳中和**。

4. Great efforts will be made **to achieve the goal by 2060 of eliminating** the effect of human activities on the environment by **afforestation, energy conservation and emission reduction, carbon capture and collection**, among others.

2060年以前，通过植树造林、节能减排、碳捕捉碳收集等消除人为产生的碳对环境的影响。

5. 中国是全球**森林资源**增长最多、最快的国家，每年完成国土绿化超6.7万平方公里，有斯里兰卡那么大。

China tops the world in **forest resource** increase, with more than 67 thousand square kilometers of land afforested annually, an area as large as Sri Lanka.

6. China also tops the world in terms of **clean power** generation, such as **hydropower, wind power, photovoltaic, biomass power** generation and nuclear power under construction.

中国的清洁发电如**水电、风电、光伏、生物质发电和在建核电**规模都是世界第一。

EXCLUSIVE WITH INGER ANDERSEN

China completed afforestation of
4.446 million
hectares in 2024, with the forest
coverage rate surpassing

25%

National Forestry and Grassland Administration

China's

Degraded grassland

Sandy and stony land

Source: National Forestry and Grassland Administration

In 2024, China also restored

3.224 million

hectares of degraded
grassland and upgraded

2.783 million

hectares of sandy and stony land.

National Forestry and Grassland Administration

CHINA
DAILY

Improving the eco-environment

China has contributed 25% of the global vegetation growth.

56.1%

Steppe vegetation coverage rate

1,200 km

Restored coastline (between 2016 and 2020)

23,000 hectares

Restored coastal wetlands (between 2016 and 2020)

China has tightened pollution control. (compared to 2015)

28.3%

PM2.5

5.8%

Days with good air quality

17.4%

Combined proportion of state-controlled water sections with good-quality surface water reaching Grades I, II, and III

Optimizing in-situ conservation

What has China achieved?

90% of terrestrial ecosystem types under effective protection

71% of key state-protected wildlife species under effective protection

China's achievements in green development

Green Development: Balancing Growth and Responsibility

气候变化

China's new development philosophy includes five pillars: innovation, coordination, green development, openness, and sharing.

生物多样性丧失

Green development addresses climate change while promoting sustainable growth.

How China implements green development

1. Practical Policies

Goals:

Peak carbon emissions by 2030; achieve carbon neutrality by 2060.

Example:

- **The “dual control” system reduces energy consumption and increases efficiency.**
- **In 2023, coal use in several provinces dropped by over 10%.**

How China implements green development

2. Renewable Energy Innovation

China leads in renewable energy production:

Tengger Desert Solar Park (“Great Wall of Solar Energy”)

Offshore wind farms in Eastern China.

Electric Vehicles (EVs)

- **Over 50% of global EVs manufactured in China (2023).**
- **Shenzhen achieved a fully electric public bus fleet.**

How China implements green development

3. International Cooperation

Belt and Road green projects:

**Garissa
Solar Plant
in Kenya
supplies
electricity to
300,000
people.**

新中国生态环境保护典型案例

案例一：三北防护林工程（1978-今）

Case 1: Three-North Shelterbelt Forest Program (1978-Present)

成就：全球最大人工林工程，覆盖中国西北/华北/东北 13 个省区，森林覆盖率从 5%提升至 13%

Achievement: The world's largest afforestation project, covering 13 provinces in Northwest/North/Northeast China, increasing forest coverage from 5% to 13%

案例二：北京大气污染治理（2013-2020）

Case 2: Beijing Air Quality Improvement (2013-2020)

措施：实施《大气污染防治行动计划》，淘汰燃煤锅炉，推广新能源车

Measures: Implemented the Air Pollution Prevention Action Plan, phased out coal-fired boilers, promoted new energy vehicles

成效：PM2.5 浓度下降 55%，2020 年蓝天比例达 75%

Result: PM2.5 concentration decreased by 55%, blue sky days reached 75% in 2020

案例三：长江十年禁渔（2021-2031）

Case 3: Yangtze River 10-Year Fishing Ban (2021-2031)

意义：中国首例流域性生态修复政策，覆盖 11 省市，保护 432 种水生生物

Significance: China's first river basin ecological restoration policy, covering 11 provinces and protecting 432 aquatic species

成果：2023 年监测显示长江江豚数量首次回升

Outcome: 2023 monitoring shows first population increase of Yangtze finless porpoises

案例四：塞罕坝荒漠化治理（1962-今）

Case 4: Saihanba Desertification Control (1962-Present)

奇迹：将荒漠变为 112 万亩林海，获联合国"地球卫士奖"

Miracle: Transformed desert into 1.12 million mu (747 km²) forest, awarded UN "Champions of the Earth"

碳汇：年固碳量达 86 万吨，相当于吸收百万辆汽车年排放

Carbon sink: Annual carbon sequestration reaches 860,000 tons, equivalent to offsetting emissions from 1 million cars

案例五：国家公园体制建设（2015-今）

Case 5: National Park System Development (2015-Present)

进展：建立首批 5 个国家公园（三江源/大熊猫/东北虎豹等），面积超 23 万 km²

Progress: Established first 5 national parks (Sanjiangyuan, Giant Panda, etc.) covering 230,000 km

2

成效：野生大熊猫数量增至 1864 只，东北虎幼崽存活率提升 40%

Result: Wild panda population increased to 1,864, Siberian tiger cub survival rate up 40%

How the West and Social Media Perceive Ecological Conservation in China

How the West and Social Media Perceive China & Root Causes

Positive Recognition

Organizations like the UN praise China's transformative efforts in renewable energy and carbon neutrality commitments.

How the West and Social Media Perceive China's ecological conservation

Criticisms and Misunderstandings

Criticisms and Misunderstandings

- Focus on total emissions;
- labeling China as the “largest polluter.”

Ignored facts:

- 1. Per capita emissions: China (7.6 metric tons) vs. US (15 metric tons).
- 2. Global consumption: 25% of China's emissions come from exported goods.

Why the West's resentment of China is so misguided

Published: February 25, 2024 9.20am EST

Over the past few years, some western commentators have proclaimed the “decline of China.” They argue China’s economy is failing, its youth are alienated and unemployed, it abuses human rights and represses its people and its demographic decline means that China will never rise to surpass western power.

The subtext of this focus on China’s problems is that western domination of the world will continue, proving the superiority of the West’s political and economic ideologies.

These eulogies for China are premature, at best.

Addressing China's Environmental Destruction

The People's Republic of China (PRC) is the world's largest emitter of greenhouse gases; the largest source of marine debris; the worst perpetrators of illegal, unreported, and unregulated (IUU) fishing; and the world's largest consumer of trafficked wildlife and timber products. While the Chinese people have suffered the worst environmental impacts of its actions, Beijing also threatens the global economy and global health by unsustainably exploiting natural resources and exporting its willful disregard for the environment through its One Belt One Road initiative. Tragically, the Chinese Communist Party (CCP) represses civil society and a free press, slowing changes that would benefit its citizens and people all over the world.

ENVIRONMENTAL
SUSTAINABILITY

地缘政治

In the current geopolitical landscape, marked by escalating tensions between Western nations and China, it's a challenge to identify potential areas of collaboration between East and West that would yield mutual benefits and foster trust. But fighting climate change is one. Climate change is a problem that

affects every nation, and it cannot be solved without China's involvement because the country contributes 27% of global emissions, according to the World Bank.

How do foreign environmental conservationists perceive China's change in recent decades?

1. Besides the changes in the environment, what other changes did Matt observe in China?

2. During Paul's first visit to China, what was better than he had expected?

3. Mangroves are an important eco-system, not only for climate change, but also for biodiversity and natural disaster resilience.

4. What suggestions do the two experts raise for China and Chinese people to make the country a greener place to live?

How the West and Social Media Perceive China & Root Causes

Root Causes of Differences

1. Cultural and political differences: Long-term collective goals vs. short-term individualism.

2. Media framing: China portrayed as a competitor, overshadowing achievements.

3. Economic interdependence: China bears the carbon footprint of global production.

Solutions: How to Address Misunderstandings

1. Strengthen Global Communication

- Collaborate with the UN to launch awareness campaigns.
- Share verifiable success stories (e.g., renewable energy and EV development).

2. Enhance International Partnerships:

- Develop joint green projects (e.g., African solar farms, Central Asian wind farms).

3. Embrace Digital Transparency:

- Create an online platform to share real-time data on emissions reductions and international collaborations.
- Build trust and counter misinformation.

An aerial photograph of a lush green landscape. A winding river or stream flows through the center of the frame, creating a series of gentle curves. The surrounding land is covered in dense green vegetation, likely crops or grass, with visible patterns of planting or mowing. The overall scene is peaceful and natural.

课后作业：中国生态保护典型案例介绍

任务目标：制作一份“中国生态保护典型案例”主题介绍PPT。

操作步骤：

1. 选题采集：从以上十大经典案例中，选择一个中国生态保护典型案例。

2. 内容生成：

- 查阅资料，撰写英文文稿，介绍案例背景、环保措施、实施效果和国内外影响。
- 生成一份思维导图，并将文档导入Kimi，使用PPT助手功能，生成PPT，检查调整。

（PPT封面为1张AI生成的该案例宣传海报）

- 将思维导图与介绍PPT上交到钉钉群文件。
