

常微分方程期中测试 (周二班)

2025 年 5 月 13 日

求解下列常微分方程

1. $(y^2 + 5x^2) dy - 4xy dx = 0$

2. $x \frac{dy}{dx} + \frac{y}{\ln x} + \frac{1}{y \ln x} = 0, y(e) = 1$

3. $(3x^2 + y) dx + (2x^2y - x) dy = 0$

4. $xy'' + 2y' = x^2, y(1) = 0, y'(1) = 1$

(1) 设 $y = ux$ $\frac{dy}{dx} = \frac{4xy}{y^2 + 5x^2}$ $\frac{dy}{dx} = u + x \frac{du}{dx} = \frac{4u}{u^2 + 5}$

$$x \frac{du}{dx} = \frac{4u - 5u - u^3}{u^2 + 5} = -\frac{u^3 + u}{u^2 + 5}$$

$$\frac{u^2 + 5}{u^3 + u} du = -\frac{1}{x} dx$$

两边积分

$$\ln|u| + 2\ln|u^2| - 2\ln|u^3 + u| = \ln|\frac{1}{x}| - \ln|C| \quad (C \text{ 为任意常数})$$

$$\therefore \frac{u \cdot u^4}{(u^3 + u)^2} = \frac{1}{Cx}$$

$$Cx = \frac{(u^2 + 1)^2}{u^5} = \frac{\left(\left(\frac{y}{x}\right)^2 + 1\right)^2}{\frac{y^5}{x^5}}$$

$$C \cdot \frac{y^5}{x^4} = \left(\frac{x^2 + y^2}{x^2}\right)^2$$

$\therefore$ 微分方程的解为 $C y^5 = (x^2 + y^2)^2$, 特解为 $y = 0$

(2) 设 $u = y^2$ $y = u^{\frac{1}{2}}$

$$\frac{1}{2} u^{-\frac{1}{2}} \cdot \frac{dy}{dx} + \frac{u^{\frac{1}{2}}}{x \ln x} = -\frac{1}{x \ln x} \cdot u^{-\frac{1}{2}}$$

$$\frac{dy}{dx} + \frac{2u}{x \ln x} = -\frac{2}{x \ln x}$$

$$u = C \cdot \ln^{-2} x - 1$$

$$f(e) = 1 \quad u(e) = 1 \quad C = 2$$

$$\therefore u = 2 \ln^{-2} x - 1 \quad \text{微分方程的解为 } y = u^{\frac{1}{2}} = \left(\frac{2}{\ln^2 x} - 1 \right)^{\frac{1}{2}}$$

(3) 等式两边同除 x^2 $(3 + \frac{y}{x^2}) dx + (2y - \frac{1}{x}) dy = 0$

经验证, 该式为全微分方程

$$F(x, y) = \int (2y - \frac{1}{x}) dy + f(x) = y^2 - \frac{y}{x} + f(x)$$

$$\frac{\partial F}{\partial x} = \frac{y}{x^2} + f'(x) = \frac{y}{x^2} + 3$$

$$f(x) = 3x - C$$

$$\therefore \text{微分方程解为 } y^2 - \frac{y}{x} + 3x = C$$

(4) 设 $y' = u$

$$\frac{dy}{dx} + \frac{2}{x} u = x$$

$$u = C_1 x^{-2} + \frac{1}{4} x^2$$

$$\because y'(1) = 1 \quad \therefore u(1) = 1 \quad C_1 = \frac{3}{4}$$

$$\frac{dy}{dx} = \frac{3}{4} x^{-2} + \frac{1}{4} x^2$$

$$y = -\frac{3}{4} x^{-1} + \frac{1}{12} x^3 + C_2$$

$$y(1) = 0$$

$$C_2 = \frac{2}{3}$$

$$\therefore \text{微分方程解为 } y = -\frac{3}{4x} + \frac{x^3}{12} + \frac{2}{3}$$
